

With three fence walls and a turret, the modifiable facade is an impressive feature. The facade can be used as a fence, partition element or as a stage for a puppet theatre. The fence section is easy to extend with additional fence and post packs. Children remain in full view for supervision through the fence pickets. The supporting fence and turret elements can be installed in the direction of your choice. Once installed, the bottom of the window frame is at the height of approx. one metre. Use the basic product and additional elements and features to build your own design according to your needs. This product does not require impact attenuating surfacing. The product is manufactured from locally sourced nordic pine. Available in Natural Tone and Flora Brown.
